Professional Summary

Entry-level Software Engineer with 1+ year hands-on experience in Java, Python, and RESTful APIs. Built secure, scalable full-stack apps using FastAPI, Docker, PostgreSQL, and JWT/OAuth authentication. Proficient in cloud deployment (AWS EC2/S3) and microservices. Eager to drive backend innovation in dynamic engineering teams.

Technologies

Languages: Java, Python, SQL, JavaScript

Frontend Technologies: HTML, CSS, Vue.js, React

Backend Technologies: FastAPI, Django, RESTful API Development, Backend Architecture Design

Database: MySQL, PostgreSQL, Database Design & Query Optimization

Cloud & Deployment (Basic): AWS (EC2, S3, RDS – Basic), Docker, Docker Compose, CI/CD Concepts

Operating Systems & Networking: Linux Basics, Shell Commands, TCP/IP Fundamentals, HTTP/HTTPS

Software Development & Architecture: Object-Oriented Programming (OOP), Data Structures & Algorithms, Microservices Basics, SDLC, Agile Methodology

Security & Authentication: JWT Authentication, OAuth 2.0, Password Hashing, Two-Factor Authentication (TOTP)

Tools & Platforms: Git, GitHub, Postman, Jira, VS Code

Projects

Full-Stack 2FA Authentication Web Application

- Engineered secure full-stack app with FastAPI backend and Vue.js 3 (Composition API) frontend, implementing user registration, hashed password storage (bcrypt), and JWT/OAuth 2.0 for 100% protected routes per project spec.
- Integrated TOTP-based 2FA enrollment with pyotp for secret generation and QR code display (via qrcode lib), enabling multi-step login (username/password + 6-digit code) to mitigate unauthorized access.
- Designed MySQL schema with SQLAlchemy ORM for secure user/2FA persistence, optimizing queries for <50ms response; built protected dashboard with real-time session mgmt and logout.
- Developed responsive screens (registration, login flow, dashboard, 2FA setup modal) using Axios for API calls; deployed via Docker for scalable, local testing.

Phonebook Management Web Application

- Developed full-stack CRUD app with FastAPI RESTful APIs for contact management (GET/POST/PUT/DELETE/contacts), handling up to 1,000 entries with email validation for 99% data integrity.
- Integrated PostgreSQL database via SQLAlchemy ORM, enforcing schema (unique phone/email, timestamped creation) and input sanitization to prevent injection attacks.
- Built responsive Vue.js frontend with Axios for API integration, featuring contact list (table layout), detail/update pages, and create form with client-side validation.
- Containerized stack (backend, PostgreSQL, Vue app) using Docker Compose with env vars for DB creds; enabled one-command deployment and inter-service communication.

Certifications

Certification	Institution	Completion Date
Data Associate	Symbiosis Skills and Professional University	June 2024
AWS Training & Certification	Amazon Web Services	November 2025

Education

Education	Institution	Completion Date	Grade
Post Graduate Diploma in Big Data Analytics (PG-DBDA)	SM VITA (CDAC Authorised Center)	August 2025	62.38%
Bachelor of Engineering	Genba Sopanrao Moze College of Engineering, Balewadi, Pune	June 2024	83.96%
